

Secure Files Without Disrupting Your Workflow Eliminate False Positives. Eliminate Delays. Keep Business Moving.

What is odix?

odix is a content disarm and reconstruction (CDR) solution that removes malicious code from files in real time, delivering clean, safe documents to users — without blocking workflows or delaying productivity.

Unlike traditional detection-based tools, odix does not rely on risky malware identification. Instead, it rebuilds files into malware-free versions.

The Problem: Security That Disrupts Business

IT and security teams today face a growing challenge: Security tools designed to protect organizations often:

- Slow down file synchronization
- Block legitimate users
- Interrupt daily workflows
- Create unnecessary friction for employees

As a result, security becomes a productivity problem.

Real Evidence from the Market

“IT administrators and users are openly expressing frustration: ‘OneDrive disrupted my workflow... synchronization slowed down considerably.’ — Microsoft Community
‘The user is blocked... even when everything looks fine.’ — Reddit / r/Office365”

These are not isolated incidents.

They represent a widespread fear of false positives and workflow interruption.

The Impact

When security disrupts operations:

- Employees lose time
- IT teams handle constant tickets
- Business processes slow down
- Trust in security systems declines

Instead of enabling growth, security becomes a bottleneck.

odix CDR = instant clean file

Zero disruption

Zero malware Prevention

for Microsoft 365 users

Secure Files Without Disrupting Your Workflow Eliminate False Positives. Eliminate Delays. Keep Business Moving.

The odix Solution: Zero Disruption Security

odix eliminates malware without blocking users or delaying access.

With odix:

- ✓ No file blocking
- ✓ No false positives
- ✓ No workflow interruption
- ✓ No waiting time

Users receive clean files instantly — and continue working.

How odix Delivers Speed and Accuracy

How odix Delivers Speed and Accuracy

odix uses patented CDR technology:

1. Files are analyzed structurally, not by signatures
2. All active content is removed
3. A clean, safe file is reconstructed
4. The user receives it immediately

This process happens in real time — without sandbox delays or detection errors.

Result:

Security without compromise. Productivity without friction.

Business Value

With odix, organizations achieve:

- Faster operations
- Lower IT workload
- Higher employee satisfaction
- Reduced security risk
- Stronger compliance

Security becomes an enabler — not an obstacle.

**Stop choosing between security and productivity.
Choose both.**
